

SOFTWARE ENGINEERING INTERNSHIP

Mid-Internship Review

Lumenor · May to July 2026

Three work-streams: QA on FlowX, a product landing page, and the IFN platform.

Basil Stevenson

ICFAI · BCA (IP2)

Company tutor: Rama Raju sir

CONTEXT

The company and my work

Lumenor builds software for solar-energy businesses: a customer suite (**solarX**, **flowX**, **fixX**), plus **coreX** for internal teams. My first half centered on **FlowX**: Inventory, Sales and CRM, HRMS, Accounting, Procurement.

01

QA on FlowX

Flow-tested FlowX: 67 tests, 19 bugs logged, including 2 security criticals.

02

Lumenor landing page

Built and shipped the public product marketing site.

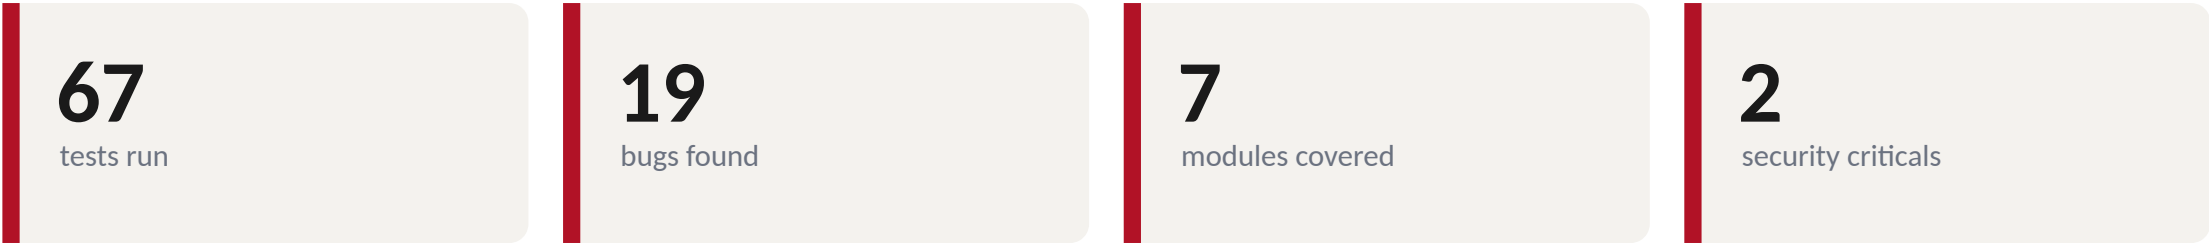

03

IFN platform

Built ICFAI Founders Network, a members-only founder platform.

Closing the loop: IFN is built for my own university's founder community.

Testing FlowX

Brief: test FlowX like a user, optimize the happy paths, flag flaws. Assigned to FixX first; moved to FlowX when FixX was not ready. I also offered security testing, from a penetration-testing background.

Selected findings (mine)

- **Account takeover:** password-reset poisoning via a client-controlled baseUrl leaks the reset token to an attacker domain (Critical).
- **Info disclosure:** a duplicate warehouse code surfaces the raw ORM error, leaking internal file paths and schema.
- **Data integrity and crashes:** address corrupted on every save, a broken CSV round-trip, a search that crashes on an undefined field.

AtK1 FLOWX - Bug Tracking Sheet						
	A	B	C	D	E	F
1	FLOWX - Bug Tracking Sheet					
2	Platform: FlowX Lumenor.in Team: Basil, Keerthi, Me, Karan, Saik					
3	Bug ID	Reported By	Date Found	Module / Feature	Bug Title	Steps to Reproduce
4	BUG-001	Karan Sawantani	27-05-2026	Brand Assets & Colors	Video files are accepted when file type is changed to "All Files"	1. Go to Settings -> Company Profile -> Brand Assets & Colors 2. Click on Change Logo 3. Change file type filter to "All Files" 4. Select a video file Only supported in accepted
5	BUG-002	Keerthi	27-05-2026	Sales & CRM (Lead creation)	System accepts invalid phone number starting with 0	1. Go to Lead - New Lead 2. Enter Phone number starting with 0 3. Click save System should not accept should display a valid
6	BUG-003	Basil	27-05-2026	Password Reset (/api/auth/forgot-password)	Password Reset Poisoning via client-controlled baseUrl parameter (Account Takeover)	1) Intercept POST /api/auth/forgot-password for a test account. 2) Change baseUrl to an attacker domain. 3) Forward and open the reset email. 4) Reset link points to attacker domain with token in URL. 5) Load link -> token reaches attacker -> reset victim's password. The password-reset using a fixed, trusted Client-supplied baseUrl
7	BUG-004	Threya	27-05-2026	Dashboard -> Events	Event saves but no notification is triggered	1. Go to Dashboard -> Events 2. Click on "New Event" 3. Fill in all event details (eg., title, time 1:12 PM, virtual meeting) After saving, at the sc notification (sound/p meeting

Tooling: Playwright automated flows (shared HTML reports); each bug logged with module, repro steps, expected versus actual, priority, status.

Lumenor landing page

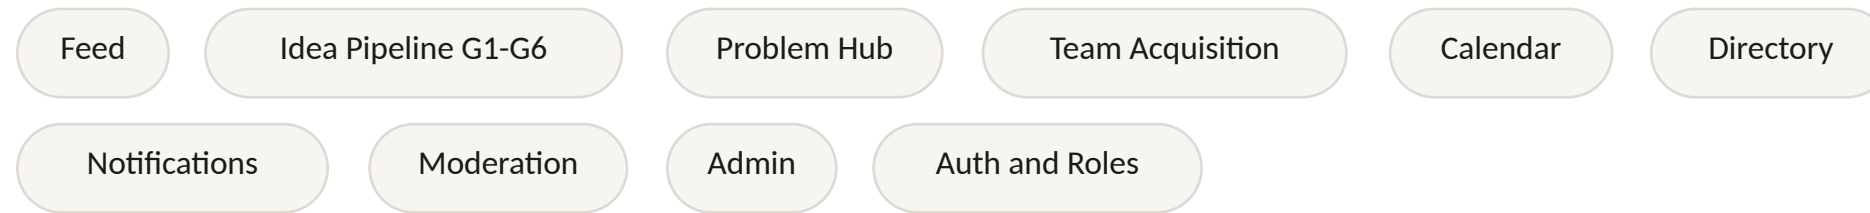

- Built and shipped the public marketing site for Lumenor.
- Headline: “Run your entire solar business in one place.”
- Responsive layout that presents the product to prospects.

Live: basiltest.github.io/lumenor

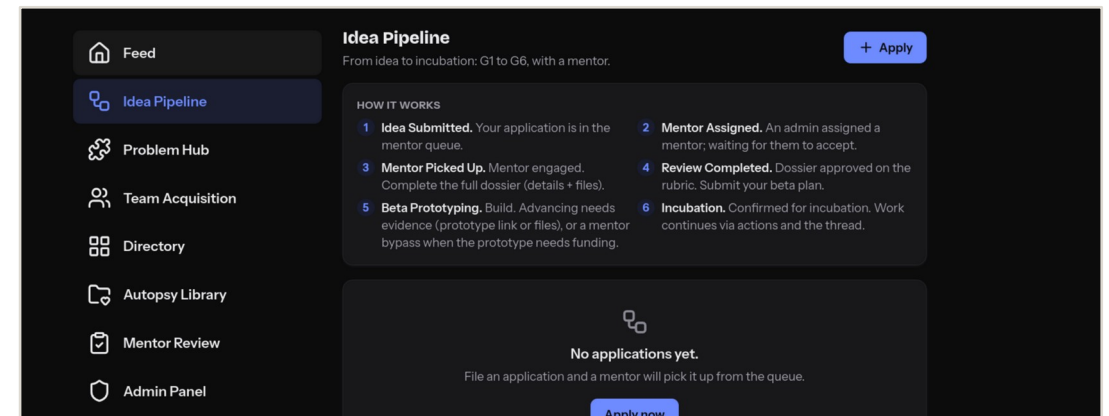

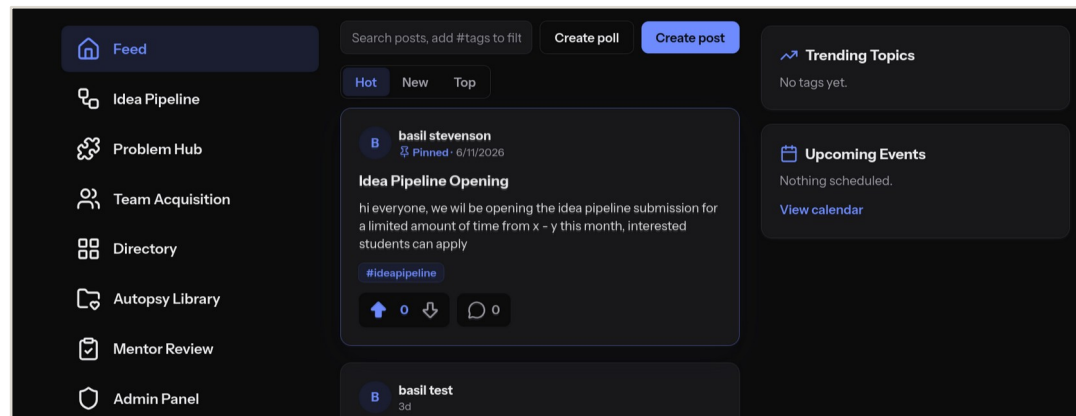

IFN: ICFAI Founders Network

A members-only platform for the university's founder community, built and iterated largely solo.

Stack: Vite single-page app on Vercel, backed by Supabase (Auth + Postgres + Row-Level Security), no custom backend. Now hardening for production and moving to self-hosted infrastructure.

OUTLOOK

What's next and what I learned

Second half

- **IFN:** finish the pipeline end-to-end testing; moderation and reporting.
- **IFN:** self-host migration off Supabase Cloud and Vercel onto the office server; captcha rollout.
- **FlowX:** retest the fixed bugs and widen coverage.

What I learned

- Reproducible bug reporting, priority triage, and security testing of auth and error handling.
- Full-stack delivery: auth, RLS and data modeling, a SPA, shipped to production.
- Working and dogfooding inside a real SaaS team.
- Building depth in Docker, Git, agentic AI, LLMs, and vector databases.

Halfway in: bugs found, products shipped, more to build.
